(57) Abstract :
 A METHOD FOR AUTOMATIC STORAGE OF BLOCKS IN BLOCK CHAINS WITH CLOUD COMPUTING A method for automatic storage of blocks in block chains with cloud computing. The method comprises receiving a plurality of block generated for storing in a blockchain on a cloud application, storing securely with the first cloud application the determined plurality of address locations in a cloud content location map in a non-transitory computer readable medium on the cloud server network device, training an AI model to make recommendations based on the training data set, determining whether the requested type of encryption method is supported by one or more application programming interfaces provided by the cloud storage site, creating a consensus group on the blockchain and associating the consensus group with a specific transaction type for transactions to be processed through the blockchain, receiving one or more shared secrets from one or more owner nodes in the block chain network, encrypting the downloaded copy of the data file to create an encrypted version of the data file and sending the encrypted version of the data file to the cloud storage site through the application programming interfaces.
